SUMMARY

Senior Backend Engineer specializing in scalable, production-grade systems with expertise in clean architecture, event-driven design, and cloud-native solutions. Proven track record of leading architectural refactoring initiatives, maintaining 99%+ uptime, and driving technical excellence in complex monorepository environments. Strong cross-functional collaborator with experience in technical ownership and system evolution. Actively leveraging AI technologies, intelligent agents, and automation tools (n8n) to enhance development workflows and deliver innovative solutions.

CORE SKILLS

Languages & Frameworks: TypeScript, JavaScript, Node.js, Python, React

Databases:	PostgreSQL, MySQL, MongoDB
Architecture:	REST APIs, Event-driven systems, Clean / Layered Architecture
Messaging:	Kafka, RabbitMQ
Cloud & Platforms:	AWS (Lambda, ECS, EKS, S3, API Gateway), DigitalOcean
DevOps & CI/CD:	Docker, Kubernetes (basics), GitHub Actions, CircleCI
Testing & Observability:	Jest, Playwright, Datadog, ELK
Security:	Auth0
AI & Automation:	AI Agents, n8n workflow automation, AI-assisted development

LANGUAGES

Ukrainian (Native) · Portuguese (Native) · English (C2) · Russian (C2) · French (B1–B2)

EXPERIENCE

Strapi Solutions — Paris, France

Backend Engineer | Oct 2023 – Jan 2026

- Architected and maintained backend services within a large-scale monorepository, driving code quality, modularity, and long-term maintainability across multiple teams.
- Led technical ownership of critical features and implementations, from design through production deployment.
- Spearheaded major architectural refactoring initiative, successfully migrating legacy codebase to clean Application/Infrastructure/Service layers, improving testability and reducing technical debt.
- Engineered secure, fault-tolerant third-party API integrations with comprehensive error handling, retry mechanisms, and data validation.

- Delivered scalable REST APIs and backend services using Node.js, TypeScript, and PostgreSQL, adhering to cloud-native principles and microservices best practices.
- Designed and implemented event-driven architectures leveraging Kafka and RabbitMQ for asynchronous processing and system decoupling.
- Optimized Docker-based build pipelines and orchestrated deployments across multi-cloud environments (AWS, DigitalOcean, Kubernetes).
- Achieved and maintained 99%+ service uptime through comprehensive automated testing (Jest, Playwright), robust CI/CD pipelines, and proactive on-call incident management.
- Drove cross-functional collaboration with Product, Engineering Management, Frontend, QA, and Customer Support to deliver customer-centric features and resolve production issues efficiently.

Datagatherers — Lisbon, Portugal

Co-founder & Backend Developer | Jul 2019 – Sep 2023

- Co-founded and architected end-to-end backend infrastructure for data aggregation, transformation, and delivery platform serving enterprise clients.
- Owned the complete software development lifecycle from requirements gathering and system design through deployment, monitoring, and iterative enhancement.
- Engineered high-performance RESTful APIs, integrated diverse third-party data sources, and optimized complex database queries for sub-second response times.
- Built production systems using TypeScript, Node.js, Python, MySQL, and MongoDB; managed AWS infrastructure including EC2, RDS, S3, and Lambda.
- Shaped product roadmap, defined technical architecture, streamlined operational processes, and participated in strategic client negotiations and contract discussions.

EDUCATION

Bachelor's Degree (not completed) — Engineering

Instituto Superior Técnico, Lisbon, Portugal
